CSE3002 – Internet and Web Programming Lab

Faculty Incharges : Dr S.Maheswari & Dr Prasanna

Lab Exercise 10 – 01/10/2020 (L58+L59+L60)

1. Create a login form with a username and password. Once the user logs in, the second form should be displayed to accept user details (name, city, phone no). If the user does not enter information within a specified time limit, expire his session and give a warning.

2. Write a PHP program to write 90 integers into a text file. Read 15 numbers at a time from the file using a PHP script and find the numbers which occur an odd number of times.

   Sample Input: 4, 5, 4, 5, 2, 2, 3, 3, 2, 4, 6, 7, 8, 6, 7
   Output: 2, 4, 8

3. Use PHP's built-in mail () function to send an email message from your email id to your own email id. The subject field should have Daisy. The message body should contain How do you do? My dear friend!
